19th Apr, 2026 ■ 05:50 PM	GHS 100.00	Credit Purchase

IMPORTANT: Tips To Save Up On Your Bills

- **Turn off lights when you leave a room.** This is one of the easiest and most effective ways to save electricity.
- **Use energy-efficient light bulbs.** LED light bulbs use up to 90% less energy than traditional incandescent bulbs.
- **Unplug appliances when you're not using them.** Even when they're turned off, many appliances still use electricity in standby mode.
- **Wash your clothes in cold water.** You can save up to 85% of the energy used to wash your clothes by washing them in cold water.
- **Air-dry your clothes.** Instead of using the dryer, hang your clothes to dry. This will save you a lot of energy and money.
- **Insulate your home.** This will help keep your home cooler, saving you money on your energy bills.
- **Upgrade your appliances.** If your appliances are old and inefficient, upgrading them to newer, more efficient models can save you a lot of money on your energy bills.
- **Use natural light whenever possible.** Open your curtains and blinds during the day to let in natural light. This will help to reduce the amount of electricity you use for lighting.
- **Plant trees around your home.** Trees can provide shade in the summer, which can help to keep your home cooler and reduce your energy costs.
- **Seal any air leaks around your home.** Air leaks can let in hot air, which can increase your energy bills. Sealing any air leaks (especially will help keep your home more comfortable and reduce energy costs).
- **Get a home energy audit.** A home energy audit can help you to identify areas where you can save energy in your home. An auditor will look at your home's insulation, heating and cooling system, and appliances and make recommendations for improvements.
